

OLAP

➔ Infor PM OLAP can help you ensure compliance, support decision making, and optimize your financial processes—without replacing your existing solutions.

Do business better.

Planning with pinpoint precision can make the difference between operating in the red or black. Yet some companies aren't equipped to provide users with access to critical information on demand. Many also lack integrated information sources, presented in a way that helps users ensure compliance, improve decision making, and add greater efficiency and accuracy to their organizations' processes. To accomplish all this, companies need a proven performance management (PM) solution with online analytical processing (OLAP) capabilities.

Leverage experience.

Infor™ PM solutions have helped companies around the globe streamline and improve the effectiveness of their business processes for more than 30 years. Infor PM OLAP—a core component of Infor PM 10—provides an optimal platform for planning, reporting, and analysis. This powerful multidimensional database ensures fast access to large volumes of summarized data that can be used to facilitate analysis and extend Infor's planning application. Plus, Infor PM OLAP allows you to leverage rather than replace your existing systems, and to browse your data from any angle and level of detail. Since the information is stored in a central database, Infor PM OLAP minimizes typical spreadsheet limitations like manual rekeying, time-consuming consolidations, and the risk of human error.

Get business specific.

Access to critical information is more important than ever to help all levels of an organization ensure compliance,

INFOR™

make more informed decisions, and streamline their financial processes. No wonder successful companies rely on Infor PM OLAP's scalable platform—which supports small applications with just a few users all the way up to large multi-user applications—to meet key information requirements.

Better planning

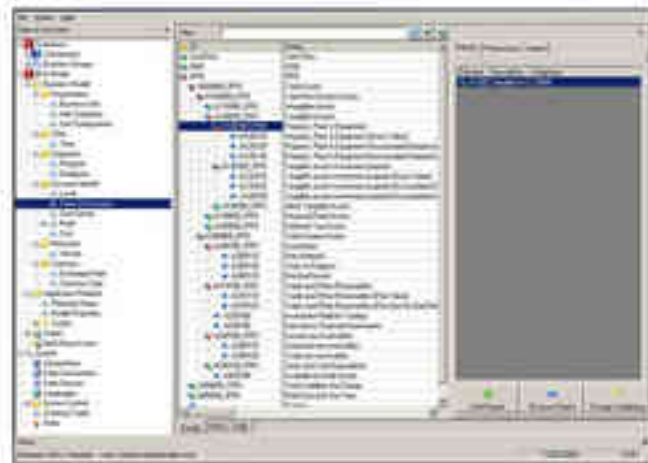

With its flexible modeling features and integration to both OLAP and relational data, Infor PM OLAP delivers an ideal platform for better planning models. Introducing multidimensional data into your modeling process enhances “what if” scenarios, improving not only your business decisions, but also your confidence in those decisions. Infor PM OLAP also makes it possible to test multiple planning scenarios quickly by automatically allocating your budget down to any level of detail. Likewise, you can set up business rules to reflect interdependencies. Since calculations are performed in real time, you'll immediately see how a possible sales rebate would impact your bottom line. User security settings are also supplied for better compliance with Sarbanes-Oxley requirements. Functions like start and end dates for users and groups as well as individual password security settings for users help you adhere to regulations.

Easy to use and maintain

Infor PM OLAP is designed for business professionals. Simply drag and drop desired data elements and zoom in on details, all without needing IT support. The solution also provides one common administrator interface with the ability to control online backups, administer databases on remote servers, and update roles from this single location. What's more, Infor PM OLAP is memory-resident, which means all “write” actions and data modifications are stored in auditable relational tables. With this function, you can easily undo multiple actions to create optimal models quickly and efficiently.

See results now.

Using Infor PM OLAP, you can provide more users with access to important information—whenever they need it. This helps ensure compliance, supports decision making, optimizes your financial processes, and leads to a rapid ROI. Even better, you don't need to replace your existing solutions.

About Infor.

Infor acquires and develops functionally rich software backed by thousands of domain experts and then makes it better through continuous innovation, faster implementation options, global enablement, and flexible buying options. In a few short years, Infor has become one of the largest providers of business software in the world. For additional information, visit www.infor.com.
